AbMole History

In **2014**, two inhibitors from **AbMole** (Tofacitinib and INCB018424) were used in animal studies by the Spanish National Center for Cardiovascular Research (CNIC) and Columbia University. The experiment results were published in **Nature** and **Nature Medicine**.

Over the past decade, thousands of AbMole products were cited in prestigious academic journals and pharmaceutical patents. AbMole earned a strong reputation among global researchers.

Hot-selling Inhibitors / Agonists

With over a decade of development, AbMole is dedicated to providing the latest and most comprehensive inhibitors/agonists. We have tens of thousands of products in stock, covering more than 1,000 targets. Our products are cited in extensive high-quality literature, supporting global researchers' innovative exploration.

AbMole Best-selling Kits

AbMole creates a variety of high-fidelity, high-sensitivity, and high-efficiency bioassay kits, covering all aspects of cell and protein experiments, making the experimental process more convenient and the results more accurate.

Recombinant DNase I (M25577)

- DNA removal from RNA samples
- RNase Free
- High purity, ready for amplification directly

Recombinant RNase inhibitors (M25575)

- Highly efficient inhibition of multiple RNase activities
- High purity and high activity

CCK-8 Kit (M4839)

- Excellent stability for long-term storage without discoloration
- Easy to wash off, ensuring more accurate detection
- Bacteria-free, providing more authentic results

Proliferation assays

Cell Counting Kit-8 (CCK-8) assay: transfectants were seeded in 96-well plates at 2,000 cells/well in 100 μ l medium. Subsequently, the cells were treated with 10 μ l CCK-8 reagent (M4839, ABMOLE, USA) at different time points. Optical density (ODs) was measured at 450 nm wavelength using a microplate reader (51119770DP, ThermoFisher). EdU experiments were performed using a Cell-Light EdU DNA Cell

Protease Inhibitor Cocktail (M5293)

- Excellent protein protection
- Low toxicity, better water solubility, and stability
- Liquid form for flexible use and easy
- Cost-effective and widely recognized

Phosphatase Inhibitor Cocktail (M7528)

- Comprehensive Protection for Protein
- Phosphorylation with Enhanced Flexibility

Western blotting

Whole cell lysate was prepared in RIPA lysis buffer (APPLYGEN, C1053) supplemented with protease inhibitors (AbMole, M5293) and phosphatase inhibitor (AbMole, M7528) in a 1.5 mL EP tube on ice.

Free Sample Policy

AbMole is offering free samples (0.5–1 mg each) of most in-stock products, allowing more users to experience our high-quality products and services.

Procedures

1. Simply apply on the page of the free sample-eligible product you're interested in. Shipping is only USD 40 or free with your FedEx account.
2. Once reviewed, we'll send a confirmation letter and ship your samples within a week.
3. In return, we ask for your feedback about our products and service.

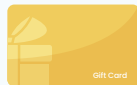

Citation Rewards Program

The AbMole Enlightening Program aims to reward our academic customers while fostering scientific cooperation and supporting your research career. We are seeking leading researchers who are making outstanding contributions to the advancement of human life sciences.

Get Reward with Your Paper Cited AbMole!

Up to **USD300 Amazon Gift Card**

All eligible participant will be rewarded at least **USD100 coupon**

How to Participate:

1. Submit your article
Contact info@abmole.com and submit your paper cited AbMole.
2. Get your Reward
We will review your article in 7 working days and send you the coupon code or Amazon Gift Card based on the Impact Factor of the journal where your paper is published. Remarkable papers will be selected by our professional team. Extra prize will be granted. More details, please visit our website www.abmole.com
